

Step Therapy

Sanford Health Plan maintains a list of medications that require step therapy. These guidelines are in place so lower cost medications that have the same clinical effect are tried first. Medical records indicating the member has tried and failed at least a 30-day supply of one or more of the step medications before the plan will cover the target medication. This policy only pertains to medications on the formulary, any non-formulary medications will be reviewed as a formulary exception.

To request a step therapy override or formulary exception, log into the Sanford Provider Portal at SanfordHealthPlan.com. If you have any questions about this list, please contact our Pharmacy Management Team at (800) 752-5863.

Antidepressant Medications (SSRI/SNRI)	
Target Medication	Step Medication
Viibryd (vilazodone) Fetzima Trintellix desvenlafaxine ER (Khedezla authorized generic) Desvenlafaxine Fumerate Khedezla Pexeva	citalopram desvenlafaxine (Pristiq generic) duloxetine escitalopram fluoxetine fluvoxamine paroxetine sertraline venlafaxine venlafaxine ER
